

OS: Unit 3 Programming Exercise

PES1UG21CS361

Nandan N

Roll no: 41

F sec

Code:

```
1  #include <stdio.h>
2  struct page
3  {
4      int frame_no;
5      int valid;
6  } typedef Page;
7  int main()
8  {
9      int page_size = 8;
10     int memory_size = 64;
11     int max_pages = 8; // Total no of frames
12     int no_of_pages;
13     int offset = 378;
14     printf("Enter the number of process required for the process:");
15     scanf("%d", &no_of_pages);
16     Page p[no_of_pages];
17     if (no_of_pages > max_pages)
18         printf("Full memory");
19
20     for (int i = 0; i < no_of_pages; i++)
21     {
22         printf("For page %d enter frame number:", i);
23         scanf("%d", &p[i].frame_no);
24         printf("For page %d enter valid bit:", i);
25         scanf("%d", &p[i].valid);
26     }
27     printf("Page table and physical address\n");
28     for (int i = 0; i < no_of_pages; i++)
29     {
30         printf("%d %d %d \n", i, p[i].frame_no, p[i].valid);
31     }
32     int page_no;
33     printf("page no and offset:");
34     scanf("%d,%d", &page_no, &offset);
35
36     printf("frame no, offset:%d,%d", p[page_no].frame_no, offset);
37 }
```

Output:

```
Enter the number of process required for the process:3
For page 0 enter frame number:3
For page 0 enter valid bit:1
For page 0 enter frame number:3
For page 0 enter valid bit:1
For page 1 enter frame number:5
For page 1 enter valid bit:1
For page 2 enter frame number:7
For page 2 enter valid bit:1
Page table and physical address
0 3 1
1 5 1
2 7 1
page no and offset:2,380
frame no, offset:7,380

OS ASSIGNMENT 4

Programming Exercise 4

Write a C program to list all files whose name matches the filter. Inputs to the program as run time arguments: directory and filename (need to support wildcard)

Example: a.out /home/Ubuntu/abc1.txt

Example: a.out /home/Ubuntu/abc*.txt

Code:

```
#include<stdio.h>

#include<stdlib.h>

#include<dirent.h>

#include<string.h>

#include<fnmatch.h>

int main(int argc,char *argv[])
{
    DIR *dir;
    struct dirent *entry;
    char *dir_path, *filter;
    size_t dir_len, filter_len;
    if(argc != 3)
    {
        printf("Usage : %s directory filter\n",argv[0]);
        return 1;
    }

    dir_path = argv[1];
    filter = argv[2];
    dir_len = strlen(filter);

    if((dir = opendir(dir_path)) == NULL)
```

```

    {

        printf("Error opening directory %s\n",dir_path);

        return 1;

    }

while((entry = readdir(dir)) != NULL)

{

    if(fnmatch(filter,entry->d_name,0)){

        printf("%s/%s\n",dir_path,entry->d_name);

    }

    closedir(dir);

    return 0;

}

}

```

Output:

```

srimitravinda@srimitravinda-VirtualBox:~/os$ gcc assignment4.c
srimitravinda@srimitravinda-VirtualBox:~/os$ ./a.out
Usage : ./a.out directory filter
srimitravinda@srimitravinda-VirtualBox:~/os$ pwd
/home/srimitravinda/os
srimitravinda@srimitravinda-VirtualBox:~/os$ ./a.out /home/srimitravinda/os/new.txt
Usage : ./a.out directory filter
srimitravinda@srimitravinda-VirtualBox:~/os$ ./a.out /home/srimitravinda/os "new*.txt"
/home/srimitravinda/os/assignment4.c
srimitravinda@srimitravinda-VirtualBox:~/os$ ./a.out /home/srimitravinda/os "*.txt"
/home/srimitravinda/os/assignment4.c
srimitravinda@srimitravinda-VirtualBox:~/os$

```
